## 100331

## Low Power Triple D Flip-Flop

## General Description

The 100331 contains three D-type, edge-triggered master/slave flip-flops with true and complement outputs, a Common Clock ( $CP_C$ ), and Master Set (MS) and Master Reset (MR) inputs. Each flip-flop has individual Clock ( $CP_n$ ), Direct Set ( $SD_n$ ) and Direct Clear ( $CD_n$ ) inputs. Data enters a master when both  $CP_n$  and  $CP_C$  are LOW and transfers to a slave when  $CP_n$  or  $CP_C$  (or both) go HIGH. The Master Set, Master Reset and individual  $CD_n$  and  $SD_n$  inputs override the Clock inputs. All inputs have 50 k $\Omega$  pull-down resistors.

## Features

- 35% power reduction of the 100131
- 2000V ESD protection
- Pin/function compatible with 100131
- Voltage compensated operating range =  $-4.2V$  to  $-5.7V$
- Available to industrial grade temperature range
- Available to MIL-STD-883

**Ordering Code:** See Section 6

**Note 3:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.**Recommended Operating Conditions**Case Temperature (T<sub>C</sub>)

| I <sub>EE</sub>  | Power Supply Current | −122                   | −60   | −122                          | −65   | mA    | Inputs Open                                                         |                              |

**Note:** The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

| I <sub>IL</sub>  | Input LOW Current    | 0.50  |       | μA    | -55°C to +125°C | V <sub>EE</sub> = -4.2V<br>V <sub>IN</sub> = V <sub>IL</sub> (Min) |                           | 1, 2, 3    |
| I <sub>IH</sub>  | Input HIGH Current   |       | 240   | μA    | 0°C to +125°C   | V <sub>EE</sub> = -5.7V<br>V <sub>IN</sub> = V <sub>IH</sub> (Max) |                           | 1, 2, 3    |
|                  |                      |       | 340   | μA    | -55°C           |                                                                    |                           |            |
| I <sub>EE</sub>  | Power Supply Current | -130  | -50   | mA    | -55°C to +125°C | Inputs Open                                                        |                           | 1, 2, 3    |

**Note 1:** F100K 300 Series cold temperature testing is performed by temperature soaking (to guarantee junction temperature equals  $-55^\circ C$ ), then testing immediately without allowing for the junction temperature to stabilize due to heat dissipation after power-up. This provides "cold start" specs which can be considered a worst case condition at cold temperatures.

**Note 2:** Screen tested 100% on each device at  $-55^\circ C$ ,  $+25^\circ C$ , and  $+125^\circ C$ , Subgroups, 1, 2, 3, 7 and 8.

**Note 3:** Sampled tested (Method 5005, Table I) on each manufactured lot at  $-55^\circ C$ ,  $+25^\circ C$ , and  $+125^\circ C$ , Subgroups A1, 2, 3, 7 and 8.

**Note 4:** Guaranteed by applying specified input condition and testing  $V_{OH}/V_{OL}$ .

**Military Version** (Continued)**AC Electrical Characteristics** $V_{EE} = -4.2V$  to  $-5.7V$ ,  $V_{CC} = V_{CCA} = GND$
