HIGH-DENSITY ARRAYS

EXTREME PERFORMANCE ARRAYS

- 4.0 Tbps aggregate data rate - 9 IEEE 400G channels
- PCIe® 6.0/CXL® 3.1 capable
- Two points of contact ensure a more reliable connection
- Fully shielded differential pairs
- Extremely low crosstalk (beyond 40 GHz) and incredibly tight impedance control
- Minimal variance in data rate as stack height increases
- Utilizes 40% less space with the same data throughput as compared to traditional arrays
- Latching terminal mates with NovaRay® cable (NVAC/NVAM-CT)
- Analog Over Array™ capable (see page 29)

HIGH-PERFORMANCE ARRAYS

- Flexible open-pin-field and cost optimized, extreme performance solution
- 5 mm and 10 mm stack heights; right-angle socket available (APF6-RA)
- Four row design with up to 400 total pins on a 0.635 mm pitch; roadmap to 1,000+ pins
- Solder column termination for improved SI and ease of processing
- Data rate compatible with PCIe® 6.0/CXL® 3.1 and 100 GbE
- Additional row and pin counts in development
- SureWare™ guide post standoffs (GPSO) available
- Analog Over Array™ capable (see page 29)

- Best in class density for power and signal
- Rotated power blades for improved performance and simplified breakout region (BOR)
- Open-pin-field design for routing and grounding flexibility
- PCIe® 6.0/CXL® 3.1 capable; supports 64 Gbps PAM4 (32 Gbps NRZ) applications
- Up to 8 power and 240 signal positions
- Low profile 5 mm stack height; up to 16 mm in development
- SureWare™ guide post standoffs (GPSO) available

UDM6/UDF6

UDM6 Series; 60 signal & 4 power

Blades rotated 90° have equal access to heat escape for uniform cooling, increased current capacity and reduced crowding

1.27 mm PITCH ARRAYS

- Maximum grounding and routing flexibility
- Up to 560 Edge Rate® contacts with 1.12 mm (.044") wipe
- 7 mm to 40 mm stack heights; right-angle available
- Solder charge terminations (IPC-A-610F & IPC J-STD-001F Class 3)
- Supports high-speed protocols such as Ethernet, PCI Express®, Fibre Channel and InfiniBand™
- Standards: VITA and PISMO™ 2
- Elevated stack heights (SEAR), press-fit tails (SEAMP/SEAFP) and cable mate (SEAC) available
- Up to 10,000 cycles with SureCoat™ palladium alloy plating for high-temp, high cycle applications
- SureWare™ standoffs (JSO/GPSO) available
- Severe Environment Testing qualified (SEAM/SEAF); aligns with MIL-DTL-55302. Visit samtec.com/set

EDGE RATE® CONTACT SYSTEM

- Smooth milled mating surface reduces wear and increases durability
- Lower insertion and withdrawal forces
- Robust when "zippered" during unmating
- Minimized parallel surface area reduces broadside coupling and crosstalk
- Designed, simulated and optimized for 50 Ω and 100 Ω systems

LOW PROFILE GROUND PLANE CONNECTORS

- 0.50 mm, 0.635 mm and 0.80 mm pitch
- Performance to 21 Gbps (QXH), 25 Gbps (QXS) and 28 Gbps (QXE)
- 5 mm to 30 mm stack heights
- Integral ground/power plane
- Single-ended or differential pairs
- Right-angle, edge mount and cable mates (see page 27) available

HIGH-SPEED BACKPLANE SYSTEMS

NOVARAY® MICRO RUGGED BACKPLANE

- Ultra high-density with up to 128 differential pairs in a single connector
- Offset footprint for optimal signal integrity
- Reliable two points of contact for stub free mating
- Configurable signal banks for design flexibility
- NovaRay® wafer design eliminates intra-pair skew while large continuous ground blades between and surrounding the differential pairs removes resonances
- Optional guidance and keying supports blind mate applications

EXAMAX® HIGH-SPEED BACKPLANE

- Meets industry specifications such as PCI Express®, Intel OPI and VPI, SAS, SATA, Fibre Channel, InfiniBand™ and Ethernet
- PCIe® 6.0/CXL® 3.1 capable
- Exceeds OIF CEI-28G-LR specification for 28 Gbps standards
- 24 - 72 pair designs (4 and 6 pairs; 6, 8, 10 and 12 columns)
- Wafer design increases isolation for reduced crosstalk
- Press-fit tails provide a reliable electrical connection
- Add-on power and discrete guidance modules available
- Cable assemblies available (see pages 24 - 25)

XCEDE® HD HIGH-DENSITY BACKPLANE

- Small form factor and modular design provides significant space-savings and flexibility
- High-performance system
- Up to 84 differential pairs per linear inch
- 3, 4 and 6-pair designs on 4, 6 and 8 columns
- Integrated power, guidance, keying and side walls available
- 85 Ω and 100 Ω options
- Combine any configuration of modules to create one integrated receptacle (BSP Series); corresponding terminal modules are individually mounted to the backplane
- Press-fit extraction and insertion tools available; visit samtec.com/tooling

MODULAR DESIGN

XCede® HD consists of signal, power and keying/guidance modules for incredible design flexibility. The modules can be customized in any configuration to meet specific application requirements. Contact HSBP@samtec.com for more information about building a full XCede® HD solution.

How to build a full solution:

- ① Right-angle modules can be built into a single customizable BSP
- ② Build a BSP part by combining any number, in any configuration, of HDTFs, power and keying/guidance modules to create one receptacle
- ③ Header modules mount to the backplane individually, in any configuration of HDTM and HPTS Series

XCede® is a registered trademark of Amphenol Corporation.

EXAMAX® BACKPLANE CABLE ASSEMBLIES

- Utilizes Samtec's Eye Speed® ultra low skew twinax cable technology for improved signal integrity, increased flexibility and routability
- PCIe® 6.0/CXL® 3.1 capable
- Highly customizable with modular flexibility
- Reduce costs due to lower layer counts
- 4 and 6 pairs; 4-16 columns
- 30 and 34 AWG
- Multiple end 2 options available
- Integrated guidance and keying options
- Cable-to-DMO (Direct Mate Orthogonal) available

ULTRA LOW SKEW TWINAX CABLE

Samtec's Eye Speed® co-extruded twinax cable technology eliminates the performance limitations and inconsistencies of individually extruded dielectric twinax cabling, improving signal integrity, bandwidth and reach for high-performance system architectures.

- Ideal for 28-112+ Gbps applications
- Tight coupling between signal conductors
- Ultra low skew twinax < 3.5 ps/meter (intrapair)
- Improved signal integrity and eye pattern opening
- Improved bandwidth and reach

EVALUATION & DEVELOPMENT KITS

Samtec Evaluation and Development Kits provide system designers and engineers easy-to-use platforms for testing many of Samtec's popular products, helping to simplify the design process and reduce time to market.

Each kit includes the evaluation platform, calibration board(s), technical documentation and test reports. Additionally, each kit is tested and verified by Samtec's signal integrity experts before customer delivery. Visit samtec.com/kits or contact kitsandboards@samtec.com for current availability.

ANALOG OVER ARRAY™ REFERENCE DESIGNS & EVALUATION KITS

High density RF applications typically require up to hundreds of individual RF connectors. Samtec Analog Over Array™ connectors can replace dozens of precision RF connectors offering a smaller footprint, less weight and cost optimization. Visit samtec.com/kits or email SIG@samtec.com.

- Open-pin-field design with maximum routing and grounding flexibility
- Analog and digital signals (differential pairs and/or single-ended) plus power through the same interconnect
- Single-ended ground pattern; differential supports RF SOCs

CUSTOMS & EXPRESS MODIFICATIONS

- Up to 50 μ " Gold and Tin Lead plating available
- Polarized positions
- Modified contacts, bodies, stamping, plating, wiring, molding and much more
- Ruggedizing strain relief, plastic housings, screw downs, latches, locks, etc.
- Mix-and-match cable end options
- Non-cataloged cable standards available

- Industry-leading engineering support for high-performance system design
- Full system optimization assistance, including simulation, testing, analysis and evaluation

ULTRA RUGGED TESTING

SEVERE ENVIRONMENT TESTING (SET)

Severe Environment Testing (SET) is a Samtec initiative to test products beyond typical industry standards and specifications for performance confidence in rugged/harsh environment industries. These products undergo additional testing, inspired by military standards, to ensure they are more than suitable for military, space, automotive, industrial and other extreme applications.

SET qualified products are Commercial Off-the-Shelf (COTS) and modified COTS for incredible design flexibility to get solutions to market faster. Visit samtec.com/SET or contact SET@samtec.com for additional information and current available test results.

NASA

Samtec's SET products are approved for NASA Class D missions that require high-reliability, quick-turn and cost-effective solutions for LEO satellites, SmallSats, CubeSats and other space exploration applications.

Samtec also utilizes NASA outgassing data to determine if certain products meet NASA's ASTM E595-77/84/90 test requirements. Visit outgassing.nasa.gov for data.

EXTENDED LIFE PRODUCT™

E.L.P.™ products are tested to rigorous standards, which evaluate contact resistance in simulated storage and field conditions.

- 10 year Mixed Flowing Gas (MFG)
- High Mating Cycles (250 to 2,500)
- Certain plating and/or contact options will apply

For complete details about Samtec's E.L.P.™ program, a list of qualifying products and test results, please visit samtec.com/ELP or email the Customer Engineering Support Group at ASG@samtec.com

DESIGN QUALIFICATION TESTING

All Samtec series undergo Design Qualification Testing (DQT), which includes:

- Gas Tight
- Normal Force
- Thermal Aging
- Mating/Unmating/Durability
- IR/DWV
- Current Carrying Capacity (CCC)
- Mechanical Shock/Random Vibration/LLCR
- Mechanical Shock/Random Vibration/Event Detection

UNMATCHED LEAD-TIMES | Innovative Programs & Systems Enable Deliveries in Days, Not Weeks.

Reserve[™]

SHIPS TOMORROW

This designation allows customers to **quickly and easily** identify availability of over 200,000 of Samtec's most popular connectors and cables – guaranteed to ship in 1-day.

Look for the **Reserve** badge throughout **samtec.com** to quickly determine if your part number is eligible, along with current availability, quantity breaks and pricing. Hundreds of part numbers are being added daily!

24HOUR SUDDEN SAMPLE[™]

Free product samples, shipped in 24-hours or less have been a cornerstone of Samtec Sudden Service® since the company was founded. Visit **samtec.com** to quickly request your sample.

2DAYS WORLD DIRECT[™]

An innovative shipping program that **bridges the gap between manufacturing facilities and customers**, allowing for manufacturing flexibility without increased costs, and with even faster lead-times. Contact **ecustomerservice@samtec.com** to learn more.

INTEGRATION LEADS TO INNOVATION

Samtec's integrated business model facilitates high-level design and development of advanced interconnect systems and **TECHNOLOGIES**. Along with industry-leading expertise, this allows us to offer effective strategies and support for **optimizing the entire signal channel of high-performance systems**.

Samtec is structured like no other company in the interconnect industry. We work in a fully integrated capacity that enables true collaboration and results in uniquely innovative **PRODUCTS** because **our technology teams are not limited by the boundaries of traditional business units**.

SILICON-TO-SILICONTM SOLUTIONS

As bandwidth, scale and power requirements continue to challenge conventional engineering methods, Samtec strives to help **optimize the landscape of your entire system** - and develop solutions, together.

Samtec's industry-leading signal integrity expertise, full system optimization strategies, and innovative products and technologies help address the challenges of **next gen data transmission to 224 Gbps and beyond**.

High Speed, Elevated Board Stacking

Samtec's RiseUp® system (RU8 Series) is designed for high speed, elevated board stacking. The two row design saves board real estate and simplifies routing compared to grid design connector systems. The use of a PCB allows odd stack heights to be readily available at a fraction of the cost of custom two piece board stacking systems. Common applications include high speed elevated board stacking to accommodate taller components (such as heat sinks).

The RU8 Series (Samtec's RiseUp® system) consists of two high speed edge card connectors and a riser card that interfaces between the two main boards. The .8mm (.0315") high speed socket (HSEC8 Series) utilizes the Edge Rate™ contact which reduces broadside coupling, providing better impedance control and limiting crosstalk. The riser card (HSC8 Series) has an embedded ground plane that maximizes signal integrity performance and signal pin density. The RU8 Series is rated at 7.5 GHz per pair at a 25mm stack height. For details go to www.samtec.com?RU8.

Board to connector lock (-BL option)

The RU8 system offers standard stack heights of 19mm, 25mm, and 30mm. Stack heights from 17mm up to 60mm are also available as application specific products. The riser card (HSC8 Series) is available in single-ended or differential pair configurations with .062" or .039" card thicknesses. Single-ended systems are available in standard 40, 50, and 60 total signal lines, and the differential pair designs are in 26, 32, and 38 total signal pairs. It is also available in edge mount and right angle options. A board to connector lock (-BL option) for increased retention is also available.

The RU8 Series is used in the telecom, datacom, industrial,

and instrumentation industries and out performs traditional two-piece high speed interconnect systems in elevated applications. The RU8 Series is capable of XAUI, PCI Express, and SATA Data Rates.

Final Inch® is a "reference design" for one of the most difficult design issues on the board - the Breakout Region (BOR) around the connector. Final Inch® Physical Art, Electrical Models, Empirical Signal Integrity Data, and Test and Evaluation Kits are available for the RiseUp® System (RU8 Series). Please visit www.finalinch.com for more information.
